Wollongong, NSW | 0416 521 148 | rhegyi97@gmail.com | rhyshegyi.github.io/rhys-hegyi-portfolio

Computer Science & Data Science Graduate

Computer Science and Data Science graduate with a decade of operations experience across logistics and hospitality. Builds on formal training in data analysis and programming with hands-on project work in Python, SQL and dbt, backed by a track record of accuracy and regulatory compliance in high-pressure environments.

TECHNICAL SKILLS

Data Engineering & Cloud: Python, SQL, R, Databricks, dbt

Analytics & Machine Learning: Pandas, NumPy, Scikit-Learn, PyTorch, LightGBM, PuLP, Regression, EDA, Data Ethics

BI & Visualisation: Power BI, Tableau, Matplotlib, Seaborn

Tools & Platforms: Git/GitHub, Docker, GitHub Actions, FastAPI, pytest, ruff, uv, TypeScript, Jupyter, Claude Code, Cursor, Notion

EDUCATION

Graduate Certificate of Data Science, University of New South Wales 2026

Data Analysis, Machine Learning, Visualisation & Ethics

Bachelor of Computer Science, University of Wollongong 2021

Software Systems, Development Methods, Programming & Databases

PROJECTS

Fantasy Premier League Squad Optimiser — Python, LightGBM, FastAPI, React, PuLP

- Built a tool using historical FPL API data (player stats, prices, fixtures) to recommend an evidence-based best team and best transfers per game week.
- Built and deployed a full-stack app combining a LightGBM points predictor with a PuLP linear programming optimiser, automated via GitHub Actions and served through a FastAPI + React app on Fly.io
- Backtested across three seasons, showing a statistically significant improvement in player ranking quality over a naive baseline ($p < 0.0001$)

F1 Data Hub — Python, Databricks, dbt, GitHub Actions, Power BI

- Pulled 77 seasons (1950-2026, ~42k rows) of F1 race, qualifying and standings data from the Jolpica API to create a personal one-stop-shop to keep track during an F1 season.
- Built an automated daily pipeline landing raw data in Databricks Delta Lake, transformed through a layered dbt star schema (4 dimensions, 3 facts), and surfaced in a 3-page Power BI report with DAX measures
- Verified outputs against real F1 history (e.g. the 1988 championship result) and caught genuine data bugs along the way, backed by 163 Python tests and 110+ dbt tests

EXPERIENCE

Vehicle Processor, Autocare, Kembla Grange 2023 – Present

- Reconciled physical vehicle stock against digital records, identifying and resolving discrepancies to maintain data accuracy across a large yard
- Performed detailed condition and compliance checks on high-value client and civilian vehicles
- Prioritised dispatch workflows and maintained accurate tracking information under time pressure

Floor Supervisor, The Illawarra Hotel, Wollongong 2016 – 2023

- Led floor operations during peak trade at a high-volume venue
- Managed stock control and cellar operations to maintain zero operational downtime
- Directed and supported junior staff during high-pressure service periods
- Promoted to Floor Supervisor based on consistent reliability and performance
